

NEET Pe JEET: AI-Ready Admission Counselling Journey

Reimagining a performance intervention as a five-module, scenario-based microlearning experience

Historical performance intervention + redesigned Rise 360 learning journey + proposed AI reinforcement

BUSINESS CHALLENGE

Sales executives and counsellors needed to improve conversion quality while navigating a two-part decision journey: first understanding the student, then engaging the parent who often influenced the final decision. The performance gap was broader than product knowledge; it included motivation, discovery, objection/concern handling, realistic practice and manager support.

LEARNING SOLUTION

Performance-first redesign

Built a five-module microlearning journey around observable counselling behaviours rather than a feature-heavy sales script.

Four coaching tools

L.E.A.R.N. for trust • C.L.U.E. for discovery • H.E.A.R. for parent concerns • N.E.B. for relevant recommendations.

Practice architecture

30 short lessons with scenarios, knowledge checks, reflection and 48-hour workplace challenges.

AI-ready scale-up

Persona-based student/parent simulations, adaptive practice, immediate behavioural feedback and manager coaching analytics.

HISTORICAL PERFORMANCE INDICATORS

97 / 112

Eligible executives trained

Targeted intervention reach

-73%

Low-performing population

Reduction during intervention period

+82%

NEET UG category growth

Observed during broader intervention period

Measurement note: These figures are historical outcome indicators from the intervention context. They should not be presented as proof that training alone caused the business movement; process, management, lead quality, incentives and market factors may also contribute.

WHY THIS MATTERS

This case demonstrates end-to-end learning strategy: diagnosing a conversion problem, separating knowledge from behaviour, designing student-and-parent scenarios, creating performance support, measuring transfer and planning AI-enabled coaching without removing manager judgement.

SKILLS DEMONSTRATED

Sales Enablement • Performance Consulting • Instructional Design • Microlearning • Scenario-Based Learning • Behaviour Change • Learning Analytics • AI Coaching Design • Manager Enablement
